

WHY VENTILATE YOUR ATTIC?

Attic ventilation is an important element of a home's design and construction. Without effective attic ventilation, excess heat and humidity can cause serious problems with costly consequences. Summer and winter, your attic will benefit from attic ventilation.

PROPER VENTILATION:

Reduces heat build-up in summer, making living areas more comfortable and reducing air conditioning usage

Helps eliminate trapped moisture that can cause mold, mildew and wood rot

Keeps roof deck uniformly cool in winter to help protect against ice dams

Extends roof shingle life

Meets typical roof shingle warranty ventilation requirements

PROVEN PERFORMANCE THROUGH RESEARCH

Air Vent is dedicated to improving the performance of ventilation products through research, product development and independent testing. We are also dedicated to sharing this information with the marketplace to help building professionals improve their knowledge and understanding of how to specify and install a ventilation system. Test results prove that our ongoing commitment has resulted in enhanced performance. As we look to the future, we will continue our efforts toward the advancement of ventilation technology.

ROOF VENTILATION

High Performance Ridge Vents from Air Vent

SHINGLEVENT® II

MULTI-PITCH FILTERVENT®

- REDUCE HEAT AND MOISTURE BUILD-UP IN YOUR ATTIC.
- VALIDATE YOUR NEW SHINGLE WARRANTY AND EXTEND THE LIFE OF YOUR SHINGLES.
- PROTECT YOUR ROOF AND ATTIC STRUCTURE.

DESIGNED FOR BEAUTY AND EFFECTIVENESS

Not only do our ridge vents look better than any other ventilation systems on the market, they perform better, too. Here's why:

ROLLED RIDGE VENTS
Tests prove that without an external baffle, they're actually unprotected openings on the roof which can allow air, rain and snow into the attic. Because it's a soft, non-rigid material, rolled ridge vents can create an uneven, wavy appearance on the roof.

TURBINE VENTS
Turbine vents provide limited air movement at all wind speeds. They look very obtrusive on the roof.

GABLE VENTS
Gable vents allow only limited airflow even when combined with soffit vents.

ROOF POTS
Confined air flow does not move along entire roof deck. Vents are highly visible on roof.

SHINGLEVENT II AND MULTI-PITCH FILTERVENT

Both vents are installed along the entire ridge to provide continuous air circulation across the entire underside of the roof deck. When combined with intake vents, ShingleVent II and Multi-Pitch FilterVents provide the most efficient, effective ventilation system available. ShingleVent II has a unique shingle-over design that makes it virtually invisible. Multi-Pitch FilterVent gives a decorative finishing touch to the ridge.

SHINGLEVENT II

Functional, beautiful shingle-over ridge vent

- EXTERNAL BAFFLE:** Our vent's special baffle deflects wind—even the slightest breeze—up and over the vent, creating an area of low pressure on both sides of the ridge vent. This low pressure actually pulls stale air from your attic, while deflecting rain and snow.
- UNIQUE INTERNAL WEATHER FILTER:** Our internal weather filter acts as an added barrier from wind-driven rain, snow, dust and insect infiltration.

- BUILT-IN END PLUGS:** Seal the end of the vent, helping to protect attic from weather damage.
- SHINGLE-OVER DESIGN:** Matching roof shingles are placed over the ridge vent, making ShingleVent II almost undetectable on your roof.

◀ *ShingleVent II's low profile makes it virtually invisible, making it the most attractive alternative in roof ventilation.*

Multi-Pitch FilterVent adds a decorative finish to the ridgeline creating a clean, beautiful appearance. ▶

Both of our ridge vent products provide 18 square inches of net free vent area per linear foot, and are designed with an external baffle to enhance performance. A unique weather filter is designed to protect against infiltration of moisture, dust and insects. FilterVent and ShingleVent II are backed by a limited warranty and Replacement Plus™ protection.

PEACE OF MIND WARRANTY PROTECTION:

ShingleVent II is backed by a lifetime, limited, transferable warranty and Multi-Pitch FilterVent is backed by a 30-year limited, transferable warranty.

Our vents provide ventilation so effective it meets typical roof shingle warranty ventilation requirements.

Our exclusive 5-year Replacement Plus™ Protection provides reimbursement for all labor costs incurred in removing any defective vent and installing the vent replacement, in addition to the replacement product itself.

THE IDEAL SOLUTION *A balanced ventilation system.*

Years of research have proven that Air Vent ridge vents, combined with under-eave venting, are the most efficient and effective system you can install. This balanced system of intake and exhaust through the attic provides greater airflow than any other fixed vent. Compare ridge vents with other options and you'll agree ridge venting is the ideal solution.

Ridge vents

Located precisely where they do the most good, at the peak of the roof, ridge vents are virtually invisible from ground level. And they provide greater airflow than other vents.

Roof vents

In order to provide the same ventilation, 15 conventional roof vents would be necessary—creating quite an eyesore.

Turbine vents

To ventilate the same area, five turbine vents would be necessary—resulting in an unattractive roof line.

ShingleVent II and Multi-Pitch FilterVent have Dade County, Florida, product evaluation approval—the country's most stringent requirements for rain infiltration.

MULTI-PITCH FILTERVENT

An advanced metal ridge vent

- EXTERNAL BAFFLE:** Our vent's special baffle deflects wind—even the slightest breeze—up and over the vent, creating an area of low pressure on both sides of the ridge vent. This low pressure actually pulls stale air from your attic, while deflecting rain and snow.
- UNIQUE INTERNAL WEATHER FILTER:** Our internal weather filter acts as an added barrier from wind-driven rain, snow, dust and insect infiltration.

- END PLUGS:** Fit snugly into the ends of the vent, helping to protect attic from weather damage.
- STURDY ALUMINUM CONSTRUCTION:** Thick embossed aluminum for years of durable service.
